BCFPI

Contents

Sections 1a-1c describe BCFPI <u>questionnaires</u> and its current deployments

Section 1d's Spreadsheet tabulates available BCFPI content

Section 2 provides details re BCFPI Scale contents, use and relevance

Section 3 Provides an overview of questionnaire development and Psychometrics, and a link to full details re survey samples, questionnaire development and psychometrics (97 pages)

Section 4 describes how BCFPI's API will interact with a CMIS to present these aspects to users

Section 5 provides examples of how the current web version interacts with users. The CMIS provider may wish to replicate some of these examples

---

1) BCFPI Overview

a) 'BCFPI' Meaning and Distribution

BCFPI (the **B**rief **C**hild and **F**amily **P**hone **I**nterview) was launched in ~2001, as a phone-based CYMH **(C**hild and **Y**outh **M**ental **H**ealth) Intake Questionnaire for Ontario CYMH service providers.

BCFPI is currently distributed by Avocette in Canada and Stretchcare in Sweden and the EU (Norway and Estonia).

> Avocette provides (1) a stand-alone web-based system for Canadian agencies, and (2), a 'closed' system for BC government agencies.

> Stretchcare provides BCFPI integrated with their **C**ase **M**anagement **I**nformation **S**ystem (CMIS), which includes other questionnaires, for a wide range of outpatient services and age ranges.

Since inception as a desktop system (2001) and later as a web-based system (2014), and then a CMIS-integrated system (2018) more than 400,000 BCFPI questionnaires have been completed in Canada and the EU.

b) BCFPI Questionnaire Types

BCFPI provides 4 distinct questionnaires, for Parents of for kids aged i) 8-17 mo., ii) 18-35-mo., iii)3–5yrs. And iv), 6-18 years

BCFPI also provides questionnaires for Youth aged 12-18 years

All of these are available as Clinical **Interviews**, or a Support Staff Administered **checklists**, or an On-line self-completed **checklists**

> These can be further configured for successive service stages: Pre-Intake, or Inservice or Discharge or Follow-up

>> Checklists typically take ~ 10 minutes for completion, and Clinical Interviews take 45 min to 1 hour for completion

c) Overview of BCFPI Scales

The questionnaires include the following scales, with scoring based on population surveys:

> 9 scales which are DSM related, typically @ 6 items per scale
> 4 scales regarding Attachment and Affect Regulation, @ 3 items per scale
> 1 scale regarding Functioning   with 3, four item subscales
> An 'Impact on Family scale', a Parent Mood scale, and a Family Functioning Scale

Additional Descriptive sections include:

- Developmental Ability, Developmental Concerns, and Family Stressors are available for questionnaires for kids up to 6 yrs of age
- 0ther CYMH concerns (12 item checklist, e.g., 'Bullied?'; 'Concerns re sexuality?")
Substance Use (Youth questionnaire only)
- Concerns re Self-Harm or Abuse… only to be included in Interviews, and in checklists if adequate system alerts are implemented
-Demographics
-Satisfaction with Service

d) Questionnaire Scales X Case Age, Service Stage and Informant type (Spreadsheet)

This spreadsheet is also available as 1) Tabular Summary of BCFPI Questionnaires

BCFPI scales and item counts, for specific Informant types, case ages and service stages

Scale	PARENT QUESTIONNAIRES (2016-2024)									YOUTH QUESTIONNAIRES (2023)					
	Age of child when data collected, and number of items in scales				Service Stage or Purpose						Service Stage or Purpose				
					Usually 'Before'	Before	During	After			Usually 'Before'	Before	During	After	
	Parent 8-18 mo.	Parent 18-36 mo	Parent 3-6 yr.	V3 6-18 yr	Very Brief Before treatment	Intake/Before treatment	Inservice	At Discharge	Follow-up	# of items in V2 Youth scale or section	Very Brief Before treatment	Intake/Before treatment	Inservice	At Discharge	Follow-up
					Service stage 'I', 'C' or 'B', below, Indicates if items included in Interview (I), Checklist (C) or Both (B), at listed Service Stage										
Attention, Impulsivity and Activity		6	6	6	C	B	B	C	C	6	C	B	B	C	C

# in checklist											54	104	106	87	78
# in Interview											n.a	107	106	n.a.	n.a.

Item counts, based on age, questionnaire mode, and stage of service

	Before Service			During Service		After Service	
	Very brief checklist	Intake Interview	Intake Checklist	Inservice Interview	Inservice Checklist	Discharge Checklist	Follow-up Checklist
8-18 mo.	37	77	73	52	52	52	43
18-36 mo.	43	83	79	58	58	58	49
3-6 yr.	60	114	107	90	87	87	78
6-18 yr V3	66	124	117	102	99	105	90

Items prefaced "****" are descriptive items, not included in any scales.
System providers can use, skip or modify these items, as needed.
Items prefaced "###Desc." should only be used in conjunction with an item 'Alert!' system

2) Content of BCFPI Scales, Applicable Case Age Ranges (8 mo. – 18 yrs.) and Informant Types (Parent or Youth)

A user provides the system software with the **Case's Age** and whether the **informant** is a Parent or Youth. It may also determine the **questionnaire mode** (checklist or interview), and the **Service Stage** (Intake, Inservice, Discharge, Follow-up). The software then presents a questionnaire for completion, with scales and items appropriate to the request. As the questionnaire is completed, the software provides scale scores, provides a Case report and saves the data in the case file.

This section is also available at 5) BCFPI Scales -CYMH, Functioning, Family, Caregiver and Descriptive Risk items

1. ***Regulating Attention, Impulsivity and Activity Level.*** This 6-item scale is composed of items that describe the child's ability to sustain attention, complete tasks, avoid distractions, and regulate activity level and impulsive responding. High t-scores on this scale reflect overactive and impulsive behaviour and correspond to the types of problems experienced by children with ADHD as described in DSM5. **{not used for 8-17 mo. questionnaire}**

2. ***Cooperating*** This 6-item scale is composed of items reflecting the extent to which the child is engaged in cooperative relationships with others. High t-scores reflect noncompliant, defiant, resentful relationships with adults and peers. These behaviours correspond to Oppositional Defiant Disorder in the DSM5. **{used in all questionnaires}**

3. ***Regulating Conduct*** This 6-item scale reflects serious rule violations and antisocial behaviour. Because the items on this scale occur infrequently in nonclinical normative populations, high t-scores will result when a small number of items are endorsed, or several items are endorsed at a low level. These questions correspond to the Conduct Disorder Scale in the DSM5. **{not used in 8-18 mo. or 18-36 mo. questionnaires}**

4. ***Regulating Callous-Uncaring Behaviour*** This 6-item subscale reflects concerns regarding limited prosocial emotions and behaviours. High t-scores on this subscale reflect a callous and unemotional interpersonal style across settings and relationships and correspond to the DSM-5's Callous- Unemotional specifier for a more severe form of Conduct Disorder. *{only used for 6-19 yr. questionnaire}*

5. ***Separating from Parents*** This 6-item scale reflects the extent to which the child is able to separate comfortably from parents. High t-scores reflect difficulties separating from parents and correspond to Separation Anxiety Disorder in the DSM5*. {not used in 8-18 mo. or 18-36 mo. questionnaires}*

6. ***Managing Anxiety*** This 6-item scale is composed of items reflecting the extent to which the

child worries about past, present, and future events. High t-scores on this scale reflect difficulties with anxiety and correspond to Anxiety Disorder in the DSM5. **{not used in 8-18 mo. or 18-36 mo. questionnaires}**

7. **Responding to Change** This 6-item subscale is composed of items reflecting the extent to which the child reacts negatively to new places, situations, activities, or people, changes in routines, or loud noises. High t-scores on this subscale reflect temperamental difficulties with responding to change and reactivity thought to be precursors of later difficulties with anxiety and worry*. {only used in 8-18 mo. or 18-36 mo. Scales*

8. *Managing Mood*   This 6-item scale is composed of questions reflecting interest or enjoyment of life and general mood. High t-scores on this scale suggest that the child may be losing interest in activities and relationships that have previously been a source of pleasure. High t-scores on this scale reflect difficulties with mood and correspond to Major Depressive Disorder in the DSM5*. {not used in 8-18 mo. or 18-36 mo. questionnaires}*

9. *Expressing Emotion* This 6-item subscale is composed of items reflecting the extent to which the child seems unreactive, withdrawn, bland, and apathetic, shows little emotion, pleasure, or interest in usual activities or exploring, has a flat expression, and seems not to care what happens. High t- scores on this subscale are thought to reflect difficulties with expressing emotion thought to be precursors of later difficulties with mood*. {only used in 8-18 mo. or 18-36 mo. Scales}*

10. *Regulating Social Anxiety* The 6-item scale reflects concerns regarding fearful behaviour in social situations. High t-scores on this scale reflect difficulties with social anxiety and correspond to the DSM5's Social Anxiety Disorder*. {not used in 8-18 mo. or 18-36 mo. questionnaires}*

11. *Regulating Compulsive Behaviour* This 6-item scale reflects concerns regarding repetitive behaviours such as hand washing, checking, ordering, or cleaning, and preoccupation with persistent rituals and routines. High t-scores on this scale reflect difficulties with compulsive behaviour and correspond to the DSM5's Obsessive-Compulsive Disorder. **{not used in 8-18 mo. or 18-36 mo. questionnaires}**

12. *Sleeping* The 6-item scale reflects concerns regarding difficulty falling and staying asleep, sleeping less than other children, waking at night, and not having a regular sleep schedule. High t-scores on this scale reflect difficulties with sleeping behaviour and correspond to the DSM5's Sleep-Wake Disorder. *{only used in Parent questionnaires for kids between 8 months and 3 years}*

13. *Eating* The 6-item scale reflects concerns regarding eating only a few particular foods or too little, not eating appropriate foods, not seeming to get hungry, not seeming to have a regular eating pattern, and refusing to eat. High t-scores on this scale reflect difficulties with eating behaviour and correspond to the DSM5's Feeding and Eating Disorder. *{only used in Parent questionnaires for kids between 8 months and 3 years}*

14. ***Affect Regulation*** Derived from the *Affect Regulation Checklist* (Morretti 2003) These two - 3 item – subscales assess two dimensions of affect regulation. **Affect Dysregulation** refers to the problems in controlling internal feelings of distress and reestablishing a state of equilibrium or calm. **Affect Suppression** refers to the tendency to distance oneself or avoid experiencing, thinking about, or expressing uncomfortable feelings. Both (or either) affect dysregulation and affect suppression may be features of previously discussed DSM related conditions***. (V2 Youth Questionnaires, and V3 Parent Questionnaires for kids 6 -17 years old)***

See Simon Fraser University/Research (www.adolescenthealth.ca/measures-1) for details regarding the Affect Regulation Checklists and the following Adolescent Attachment and Avoidance Checklist.

 See SFU Attachment Programs (www.adolescenthealth.ca/connect-attachment-programs) regarding related Attachment treatment programs (see scale, below)

 See SFU /journal-articles-and-books (www.adolescenthealth.ca/journal-articles-and-books) for an helpful list of research and programming related to Affect Regulation and Attachment programs.

---

15. ***Adolescent Attachment and Avoidance*** Derived from the *Adolescent Attachment Anxiety and Avoidance Inventory* (AAAAI, Moretti 2003) these two - 3 item - subscales, assess the two underlying dimensions of parent-child attachment. **Adolescent Attachment Anxiety** refers to hyperactivation of the attachment system and expressed in fear of parental rejection and abandonment, and a persistent need for reassurance. **Adolescent Attachment Avoidance** refers to suppression of the attachment system and expressed in reluctance to seek closeness or share feelings or thoughts with parents, and persistence on independence. Both (or either) attachment anxiety and attachment avoidance may be features of previously discussed DSM related conditions***. (V2 Youth Questionnaires, and V3 Parent Questionnaires for kids 6 -17 years old)***

BCFPI Composite Scale Scores, based on Preceding Scales

1. ***Externalizing Behaviour Score.*** This scale score is based on the 6-item Regulating Attention, Impulsivity, and Activity Level subscale, the 6-item Cooperating subscale, the 6-item Regulating Conduct subscale, and the 6-item Regulating Callous-Uncaring Behaviour subscale. **An Externalizing score is computed only if the required age-appropriate Externalizing subscale scores have been computed.**

2. ***Internalizing Behaviour Score.*** This scale score is based on the 6-item Separation from Parents subscale, the 6-item Managing Anxiety (or Responding to Change) subscale, the 6-Item Managing Mood (or Expressing Emotion) subscale, the 6-item Regulating Social Anxiety subscale, and the 6-item Regulating Compulsive Behaviour subscale. **An Internalizing score is computed only if the required age-appropriate Internalizing subscales have been computed.**

3. ***Regulating Senses and States Score.*** This 12-item scale score is composed based on the 6-item Eating and the 6-item Sleeping subscale. **A Regulating Senses and States score is**

computed only if both Regulating Senses and States subscales have been scored.

4. ***Total Problem Score.*** This scale score is based on the Externalizing Problems Scale, the Internalizing Problems Scale, and the Regulating Senses and States Scale. **A total problem score is computed only if the required age-appropriate Mental Health subscales have been computed**.

16. *12 item Child Functioning Scale and 3, 4 item Subscales*

The Child Functioning Scales reflect the extent to which the Mental Health problems reviewed above are perceived to adversely affect the child's social participation, the quality of the child's social relationships, and school participation and achievement. High T scores on the Child Functioning Scale' subscales reflect more severe functional impairment. To determine which area contributed to high scores on this subscale, the response to each item should be examined in the listing of questions printed with the ***Standard Parent Report***.

17. **Impact on Family Scale**

This 6 item scale reflects the extent to which the child's problems are perceived to have influenced the family's activities (external social networks) and family comfort (internal family functioning). These items include the extent to which the child's behaviour influences visits to/from friends and relatives, the family's ability to use childcare, and the family's ability to take the child on shopping trips. High T scores on this scale suggest that the child is perceived to limit the family's relationships with others and mobility in the community and to be a source of conflict and anxiety within the family. High T scores on this scale reflect greater impairment in family functioning.

Risk Factor Scales

18. ***Informant Mood.*** This 6-item scale is derived from the Centre for Epidemiologic Studies - Depression (CES-D) 20-item scale. High T scores reflect symptoms of depression such as depressed mood and activity, attentional problems, sleep difficulties, and loss of appetite.

19. ***Family Functioning.*** This is a 6-item scale derived from the McMaster Family Assessment Device's (FAD) 12-item General Functioning scale (Epstein, Baldwin, & Bishop, 1983). High T scores on this scale suggest difficulties with problem solving, communication, support, or general relationships.

Descriptive sections in questionnaires for 8 months to 6 years

- 7 questions re the parent's judgement re the child's capacity re 7 developmental domains
- 7 questions re the parent's concern re the child's capacity re 7 developmental domains
- 8 questions re whether the child experienced specific stressors in their lives

Descriptive Sections for Parents of kids 6-18 yrs, and Youth aged 12-18 yrs

- Other Concerns ('Never', Sometimes' Often')
  - (Sleeping) Getting too much sleep, too little sleep, or sleeping poorly
  - (Eating) Eating too much or not enough; feeling too thin or too heavy.
  - (Bullying) Bullying other kids, in person, or on-line
  - (Fears) Disturbing fear of specific things... for example, needles, bugs, high places
  - (Spasms) Making sudden strange noises or sudden movements
  - (Strange thoughts) Confused thinking or hearing; seeing or believing strange things
  - (Bullied) Being bullied by other kids, in person, or on-line
  - (Trauma) Disturbing memories, which keep repeating, of a very bad experience
  - (Speech) Trouble speaking or understanding what people say
  - (Development) Not being as smart, coordinated or strong as other kids of the same age
  - (Urination) Wetting the bed, or clothing
  - (Sexuality) Uncomfortable about being a girl or a guy

Descriptive Sections for Youth

- Substance use (4 questions)

Descriptive Sections, Parents and Youth, All ages

- ~ 8 Demographic questions (Intake only)
- 9 Satisfaction items (Discharge only)

3) Questionnaire Development and Psychometrics

1. BCFPI includes 4 distinct <u>Parent</u> Child and Family Mental Health questionnaires, for kids aged 8-17 mo., 18-35-mo., 3–5 yrs., 6-18 years and questionnaires for <u>Youth</u> aged 12-18 yrs
2. The questionnaires are based on surveys of representative population samples including:
   i. 4,889 Canadian parents (surveys conducted 2016-2024)
   ii. 1,529 Canadian Youth (2023)
   iii. 2,645 Swedish Parents (2024)
   iv. 1,534 Swedish Youth (2023)
3. Factor analysis was used to identify <u>efficient item sets</u> (typically observed to be 6 items per scale for good psychometrics and minimum informant burden). These were associated with <u>9 DSM CYMH categories</u>.
   i. Additional analysis of survey data was used to identify age and gender specific <u>population means and standard deviations</u> for these 9 scales, for Canada and Sweden
   ii. Post hoc analysis examined test-retest measures, to establish scale <u>suitability for outcomes measures</u>
4. 10 related Child or Family scales were created
5. Additional post hoc analysis was used to establish <u>face validity of these scales</u>, by comparing the 9 CYMH scores to the related scales, including measures of Child and Youth <u>functioning</u>, <u>Family Impact</u> and <u>Caregiver Mood</u>

> For full details regarding the development of these questionnaires, and scale psychometrics, see BCFPI Training and Support Item 150 <u>BCFPI Scale Development and Psychometrics</u>

4) BCFPI's API (Application Programming Interface) (Available for English, French and Swedish Questionnaires)

Increasingly, sites expect BCFPI to be fully integrated with their Case Management Information System (CMIS).

BCFPI is building an API which will provide CMIS software with details about BCFPI Questionnaires and scores for completed BCFPI Questionnaires. CMIS software will manage all desired reporting, data storage, and user interaction. The BCFPI API will not receive any identifying or narrative information and will not store any data beyond usage metrics.

a) SCOPE of CMIS's BCFPI Deployment is Controlled by CMIS

A given CMIS may provide user access to all BCFPI questionnaire types, or may limit questionnaires available to users, based on:

- Informant type (Parent and or Youth; 'Teacher' no longer supported by BCFPI)
- A limited age range (e.g., case age 6 -18; exclude 8 months-5 yrs; columns B-E in pg. 2 table). Case age is calculated based on DOB, and UI warning should be provided if the case age is out of range
- Limited Stages of Service (e.g., Intake only; columns F-J in pg.2 table)
- Limited modes (generic, rather than Clinical interview, Checklist, etc.; 'B' or 'C' in table)

An example of Questionnaire Set-up UI from the web version of BCFPI, covering all of the above options, is shown below:

Add Questionnaire Wizard Your current agency is: CMHC1

Step 1: Specify Questionnaire Information

Questionnaire Wizard

In Step 1 of the wizard, you must select an entry from each of the lists, namely **Informant**, **Type**, **Stage**, and **Questionnaire Mode**. Additional information is available by clicking the heading label of each list.

	Informant		Type		Stage		Questionnaire Mode
Select	Parent	Select	Interview	Select	Very Brief	Select	Clinician Interview
Select	Teacher	Select	Checklist	Select	Intake	Select	Staff Administered
Select	Youth			Select	InService	Select	Email
				Select	Discharge	Select	Office Workstation
				Select	Follow-up	Select	Paper Form

5) Characteristics on the Web Version of BCFPI

CMIS providers will implement BCFPI in a fashion that is compatible with other items in their CMIS. The following sections describe features of the web version of BCFPI that have evolved to be useful to users. CMIS providers are encouraged to consider implementation of these features for BCFPI, in their systems.

a) Questionnaire and UI Differences for Interviews vs Checklists

BCFPI's web version includes a UI intended to support <u>Clinical Interviews</u> …

1. The clinician can record a narrative, on a continuing basis, as the interview continues
2. Clicking a Scale Heading in the 'Interview tree', at left, opens the list of its items, at right
3. The clinician can choose where to start, and how to proceed
4. The interviewer can add comments re responses
5. The system provides introductory section prompts, typically specifying a time frame (also used in checklists)

A (support) staff administered checklist would not have feature 1,2,3, or 4

Online self-completed checklists should display one <mark>item</mark> per screen, with the time frame (e.g. last 6 months) specified with each item.

- Informants can skip items (scoring algorithms compensate for up to 1 skipped item per scale
- Showing one item per screen, and moving response choices randomly to different L-R-L screen locations minimizes occurrence of repeated response sets
- BCFPI Inc.'s field experience indicates that many respondents prefer self-completed checklists to on-line interviews. They are described as quick (~ 10 minutes) and convenient, and are congruent with how the population surveys were conducted

b) Single case Reports

The next 2 pages show an example of a BCFPI web-version case report. The graphical summary on page 1 is followed by an Enrolment history on pg. 2, followed by a list of scales, scale item text, and scale item responses. The graphical summary and items list with responses should be replicated in the CMIS's version of a single case report.

BCFPI
Brief Child and Family Phone Interview

Client	ABC ; Male, Age at Questionnaire: 7 years, 5 months
Identifier	123456789
Informant	DBC ; Female, Parent
Questionnaire	Conducted by Clinician XYZ

NARRATIVE

This is a report re a questionnaire completed as a 'Checklist'. Users can add comments to this narrative section after checklist data has been entered. These comments will be saved with the questionnaire and appear with any case reports

GRAPH

	50	65	70
Reg Attent, Imp & Act	72.8		
Cooperate	68.2

Fam Funct (FAD)	46.0		

This 7 yr 5 mo boy had CYMH scores higher than 7% of the Canadian survey sample for 'Reg of Attention', 'Cooperating', 'Conduct', 'Externalizing', Separation', 'Int & Ext',.
He had high Functioning scores for 'School', and 'Global functioning' His family reports a high level of concern

A t score =>70 reflects a scale symptom frequency as high as **the most symptomatic 2%** of the representative Canadian survey sample
A score =>65 is as high as **the most symptomatic 7%**

BCFPI
Brief Child and Family Phone Interview

Standard Parent (6-19 years) - No Names
Parent Intake Checklist 6-19 yr - EN v 2.0

Client	ABC ; Male, Age at Question
Identifier	123456789
Informant	DBC ; Female, Parent
Questionnaire	Conducted by Clinician XYZ

> His enrollment history reveals e was first referred in Jan 2017, and closed after 14 months in April 2018, and now re-referred in June 2019. We should check his file fr previous BCFPI Qs (he has several), and obtain a comparative report if available (link available elsewhere in this document)

ENROLLMENT HISTORY

Agency	Program	Referral Date	Admission Date	Discharge Date	Client Status	Questionnaire Stage
Agency ABC		Jan 27, 2017	Jan 27, 2017	Apr 12, 2018	Discharged	After
	Prog A 0-6	Feb 06, 2017	Feb 22, 2017	Apr 12, 2018	Discharged	After
	-Prog B	Jan 27, 2017	Jan 27, 2017	Feb 06, 2017	Discharged	After
Agency ABC		*Jun 05, 2019*	*Jun 05, 2019*		*Active*	*During*
		Jun 05, 2019	Jun 05, 2019	Jun 21, 2019	Discharged	During
	Prog C	Jun 21, 2019			Waiting	Before

INTERVIEW QUESTIONS AND ANSWERS

Mental Health
  Regulating Atten., Impuls., and Activity
    distractible, has trouble sticking to an activity
      Often
    Has difficulty following directions or instructions
      Often
    impulsive or acts without stopping to think
      Often
    Jumps from one activity to another
      Often
    Fidgets
      Often
    difficulty organizing tasks
      Often

> 72.8.
> Parent report that all of these symptoms occurred 'often' during last 6 months

  Cooperating
    Defiant, talks back to adults
      Often
    Blames others for his/her own mistakes
      Often
    easily annoyed by others
      Often
    angry and resentful
      Often
    loses temper
      Sometimes
    argues with adults
      Sometimes

> 68.2

2 of BCFPI's web-version training items provide further suggestion re interpreting BCFPI data:

10.Understanding BCFPI Scores, Scales and Response Patterns (Note pg.1 "The scales are not Diagnostic"

15) Steps in Interpreting a BCFPI Case Report

c) Comparative Case Reports

The user selects the questionnaires to be compared... in this example, Parent-completed and a Youth completed Intake Checklists in Nov 2019.

Users can also select and compare a case's Intake, Inservice, Discharge and Follow-up questionnaires, or questionnaires completed by 2 parents, or questionnaires (up to 6) completed by treatment group members.
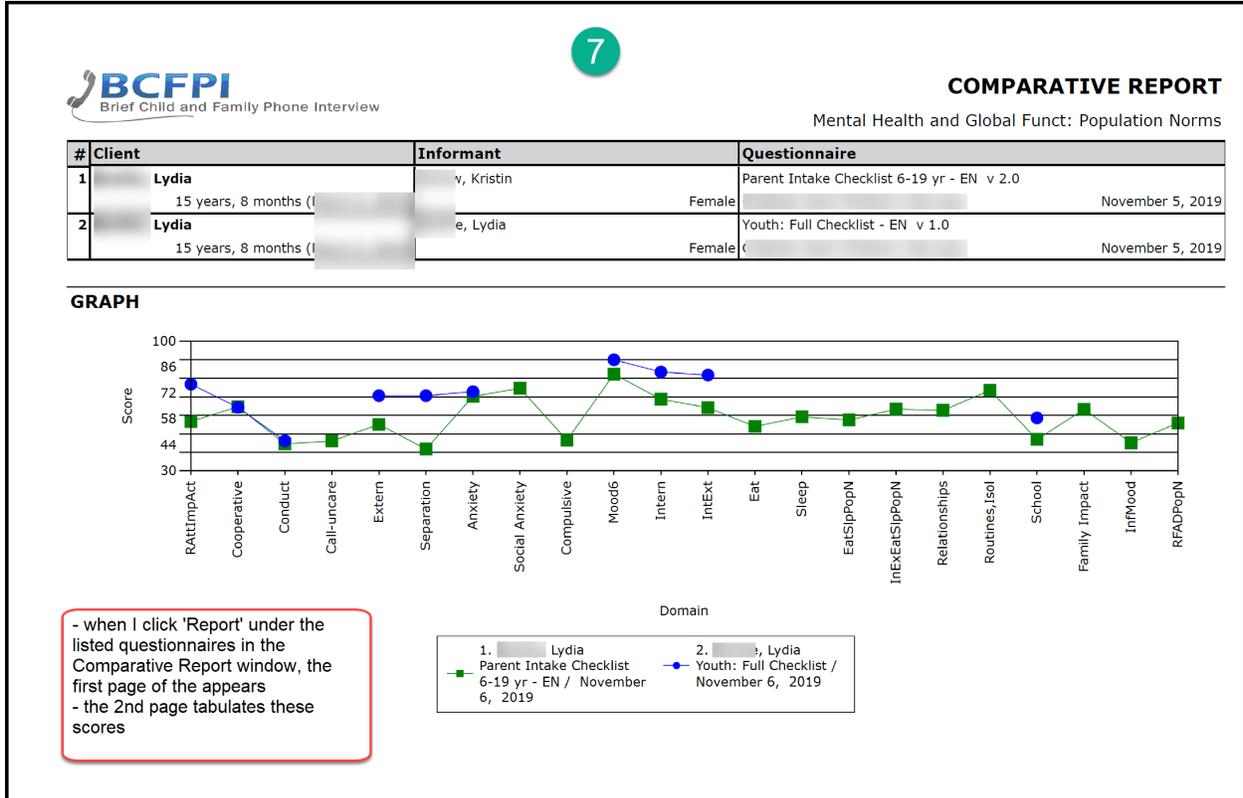

d) Aggregate Data Storage and Example Reports

BCFPI Inc. suggests that CMIS providers maintain CMIS system-wide files, **for consenting agencies and cases**, containing non-identifying exports of questionnaires, including:

'Header data', including …

BCFPI Case ID (non-identifying CMIS encrypted Case Id for export files and aggregate reports)
Questionnaire Type
Scheduled Date
Actual Date
Mode
Conducting Agency
Interview Key
Informant Type
Client Gender
Client Interview Age
Administrator-defined Treatment Stage

Scale scores, ~ 28 items, including composite DSM scores
and selected, non-scored data items:

Developmental Ability (7 items; for cases 8 mo. To 5 yrs)
Developmental Concerns (7 items; for cases 8 mo. To 5 yrs)
Stressors (8 items; for cases 8 mo. To 5 yrs)
Other concerns (OC)
Demographics (8 items)
Substance use (4 items, Youth Q)
Satisfaction with service (9 items, Discharge Q)

The records in these files should be linked to related CMIS case data including

Agency Referral, Admission and Discharge dates
Program Referral, Admission and Discharge dates
Other related Service files, relevant for aggregate reports

If all CMIS providers adopt a similar framework, they could contemplate system-wide aggregate reports for system managers and funders.

Sample report pages from BCFPI's web version follow:

This example shows % and number of this agency's cases with scale scores comparable to the highest 7% of population scores, X age and X sex

6c Prevalence X age and Sex for cases admitted to Agencyduring report period

This example compares discharge and follow-up scores, over time

	A	B	C	D	E	F	G	H	I	J	K

8fi Follow-up averages compared to discharge averages 3-15 months after discharge measures

Set A = Parent **Discharge** questionnaires, created ad hoc by users when case is discharged
-Set B = Parent **Follow-up** Questionnaire, sent automatically to these parents, 6 and 12 months after discharge
Threshold =0 , hence all Discharge questionnaires are included
- the intervals in the table below refer to the time between the Discharge checklist and the follow-up checklists.

-the agency is emailing ad hoc Discharge Checklist data requests when the case is closed.
- the system will auto-send 2 semi-annual Follow-up checkists to case who consent, at the end of completing their discharage checklist

34% of consenting parents provided follow-up data, up to 24 months after discharge.
The symptom severity levels for most domains continued in in non-clinical range (<65)

This is a very good result, provided by a prevention-oriented. parent-skills

Parent Intake Q

-A green score in columns B,C,E or F, <65, is considered to be **'Normal'**
'Effect Size' is in columns D and G

Set A Interview Questionnaire.Questionnai	(Multip	Parent Discharge Q	
Set A Interview Threshold.Threshold	0

e) Response Rates

Reponse rates support judgements re the validity of aggregate results. In the following example, Assessement Response rates for Intake checklists @77% are good... comparable to field completion rates for Interviews

This example shows limitations of preceding discharge and follow-up results; 51% of cases completed discharge checklists, and 34% completed follow-up checklists. While low, these are good response rates for semi-automatically acquired field data.

8 G CHECKLIST COMPLETION RATES

BCFPI
Brief Child and Family Phone Interview

Number of Completed Email Questionnaires by

Compiled Oct 1 2024 pgp
